ANNUAL 30,000 seeds 1/32 oz. 68° 2-3 weeks

Adaptable to all growing conditions, Begonias are rapidly forging ahead as one of the most popular pot plants.

They do well in the home where light and heat conditions are not at their best, also as bedding plants for the partially shaded spot in the garden.

Monthly sowings from August to March will insure ample supply of plants for customer needs.

FOR GREENHOUSE AND

Asters in the Greenhouse

The off-season production of Asters as a greenhouse crop is proving most profitable. While Asters can be flowered all year on a schedule similar to the one used for "Mums," it is as an early Spring and Summer cutflower they are at their best.

Requirements are simple: a night temperature of 50° and the use of additional lighting from the seedling stage until plants are 20 to 24 inches tall. We recommend the use of 60 watt bulbs with reflectors spaced 5 ft. apart (the lighting arrangement as you have it set up for Mums will do nicely). Additional lighting must be given from September 1st to May 1st, or until the first flowers show color, and from sunset to 10:30 P.M. At other times the natural light is sufficient.

The Giant Incurved Aster has proven most popular for this purpose, with heavy demand for the White, Rose Pink and Shell Pink. Use sterilized soil and space plants 8 x 8 inches.

A portion of Ohio State's recommended growing schedule follows and is readily adaptable where the suggested 50° night temperature is maintained.

We find this schedule works out satisfactorily in most areas. However, there is apt to be more variation from year to year than with Mums.

SOW SEEDS	POT	BENCH	APPROXIMATE FLOWERING DATE
December 20	January 10	March 1	May
February 1	February 20	April 1	June
March 15	April 1	May 15	July
April 20	May 10	June 15	August
May 20	June 10	July 15	September

Dwarf Asters in Pots

These new pot plant Asters should be given additional light from seedling stage until plants are 20 to 24 inches tall. We recommend using lights from sunset until 10:30 P.M. Use 60 watt bulbs with reflectors spaced 5 ft. apart, or use the lighting arrangement as set up for your Mum planting.

In keeping quality, both as a cutflower or pot plant, the Aster compares favorably with the Mum. Add to this a wide range of color, white to darkest red and deepest blue.

Sow seed in December and January for April and May flowering. Much in demand for Easter and Mother's Day.

ASTER
DWARF QUEEN

Outdoor Aster Growing

The most widely advertised Wilt Resistant Aster will show no resistance to Wilt when grown in badly infected soil. We suggest a different location each year for your Aster planting, as well as steam sterilization of soil. Sow seed six weeks before planting out date and three weeks after seed sowing the seedlings should be put into Val-Peat Pots and three weeks later they will be ready for planting out. Space a foot apart in beds to insure a working area to set up wire or string supports. A cloth or plastic covering will provide protection against the leaf hopper who spreads Aster Yellow. An occasional spraying or dusting of your planting with Parathion should protect your Asters from infection. We recommend the use of Parathion only for those experienced with it. D.D.T., although not quite as effective, is recommended where safety is a factor.

In sowing Calceolaria seed, use only loose, sterilized material. Responds best when a night temperature of 60° is maintained. Seed being very fine does not require soil covering. During bud development period a temperature of not over 50° is recommended (Cornell University). When plants are of sufficient size to handle, put into small Val-Peat Pots, later shifting to 4 or 5 inch pots. A regular insect spraying program should be instituted and we recommend the use of Parathion. Calceolaria are most susceptible to aphis. Give some shade from late February on and water planting only when dry. Too much water causes yellowing of foliage.

Cineraria

ANNUAL 6,000 seeds 1/32 oz. 68° 2-3 weeks

A January sowing will provide nice 3 inch plants in May for combination work. For best results do not pinch.

CAUTION: Do not use soil in which Mums have been grown, particularly if your Mum planting was affected with Verticillium wilt or Seidewitz disease. Soil-borne fungus such as these will quickly attack your Cineraria causing the lower leaves to wilt and die and then gradually kill the entire plant. Steam sterilization of soil is important and as a prevention we recommend the use of new field soil from seed flats to finished pot.

PINK BABY

WHITE BABY

Impatiens

ANNUAL 65,000 seeds oz. 70-75° 2-4 weeks.

All too frequently the Impatiens is overlooked by the annual bedding plant grower. There is no finer annual for the shady location. Grown in full or partial shade, the dwarf varieties attain approximately the size of bedding Petunias. The plants are covered with bloom and the intense coloring is seldom equaled by other bedding plants.

For bedding purposes, use the dwarf strains which seem to retain their growth habit even in the late season. Temperature variation seems to have little effect on the Impatiens. Grow them from seed, they are free flowering and can be depended on to give satisfaction. Earliness makes the Impatiens readily adaptable to flat and Val-Pac growing. 2¼ to 3 inch plants for spring bedding sales are available from a January sowing, while dwarf varieties sown in August will produce excellent blooming pot plants in November and December.

Impatiens like heat and moisture, suggest 70° minimum for best germination results and keep moist.

Annual Larkspur

ANNUAL 8,500 seeds oz. 54° 3-4 weeks

Larkspur does not germinate well in hot weather and we recommend chilling seed for several days in an ice box (45°-50°) if sowing must be made in summer heat.

For growing under glass to follow late Mums, we recommend a planting in late December to early January, and band or pot the seedlings. Plants are spaced 10 x 10 in. on raised benches and grown at 45°-50°.

Direct ground sowing will bring Larkspur into crop in early spring. From an August 15th to September 15th sowing, seedlings will be of sufficient size to winter over if given a light mulch. Another method is to sow seed in late October to November so it will not germinate until early the following spring. Care should be made to select a location with good drainage.

Extensive Larkspur trials over a period of years, under glass and outdoor cultivation, have caused us to revise our listing. We have included only those colors which have proven most satisfactory under varied growing conditions and at the same time are in popular demand.

All are the popular "Base Branching" type. Long spikes, closely set with full-double flowers. Upright growth, early, vigorous growers.

Pansies For Bedding

ANNUAL 24,000 seeds oz. 55-90° 2-3 weeks.

Pansies now vie with Petunias in importance as spring bedding plants. This popularity is due to improvements in strains in recent years, and newer methods of culture. The home gardener likes the Pansy—have plenty for early spring sales. Basically there are two methods of culture, either will assure your having strong healthy plants in bloom early.

Mid-winter sowing, late November through January. When seedlings are of a size to handle, transplant to small flats or "paks" and grow on cool, 50 degrees, and be assured of blooming plants for earliest sales. Six blooming pansy plants in a Vaughan Val-Pac container is something the home gardener will find hard to resist.

Summer sowing, early August, has for many years been the accepted time to start pansies. Spaced 4 x 6 inches in a cold frame, given winter protection, loose straw, perhaps, plants will be well established before winter sets in. Here again blooming plants are available early in Spring.

PETUNIA F-1 CALYPSO

All Doubles . . . For Pots—Bedding

Sow "Doubles" earlier than ordinary strains to have for sale at the same time. For "flat" or "pak" sales, allow 12 to 15 weeks from sowing to sale date—depending on your market needs. In Chicago, sow no later than December 15 for 3 inch for May combinations. January 1 sowing, grown cool, 50°, will insure strong 3 inch for late May. Well shaped plants with several blooms in 4 to 5 inch for April and May pot plants, or 3 inch for March, result from seed sowing not later than November 15.

Like all other Petunias—"Doubles" need good drainage and cool temperatures. Dwarf habit of growth is lost if grown too high. 55° is ideal.

All break readily but Sonata and Minuet respond best to one pinch.

Sakata (Japanese) Strain

The well doubled, fringed flowers, averaging 3½ in. across, are freely produced on plants that are bushy and dwarf. An attractive pot plant strain. 10 in.

The Best in Double Stocks

ANNUAL 18,500 seeds oz. 54-90° 2 weeks

Stocks are easily grown and a profitable cutflower item. Thoroughly sterilize soil and benches before sowing as precaution against root-rot. Seed may be safely sown in our area from mid-July to mid-February. Later sowings tend to show blindness. From an August sowing the first flowers may be cut at Christmas, if given additional lighting (40 to 60 watt lamps spaced 5 ft. apart). Normal flowering for such a planting is January. Successive sowings insure a continuity of bloom.

The Non-Branching or Column Stock is most generally grown and should be planted 3 inches in the row and 6 inches between rows, producing a single stem. Since heat creates a tendency to blindness, not over 50 degree night temperature should be used. To secure the greatest percentage of doubleness, largest and most vigorous seedlings should be selected.

Varieties preceded by star (★) are the most popular colors.

Zinnias . . . always popular for bedding and cutting

ANNUAL 2,500 to 4,000 seeds oz. 68-86° 1-2 weeks.

An easily grown annual that responds quickly when soil and atmospheric conditions are right. Wide variation in flower size, type and height has increased the interest in the Zinnia. It is now much used for cutting, because of its long lasting qualities, and makes an excellent background subject and dwarf sorts are also used in the garden border.

More and more the home gardener is depending on the grower for his plants, preferring to buy them rather than make his own seed sowing. To insure a good supply of plants, we suggest seed be sown about 30 days before the start of your bedding plant selling season.

Zinnia seed may also be sown inside in February and March for inside cutting. Sown in April plants will bloom from May 20 to June 20 and from a May sowing cutting material will be ready from June 10 to 20.

Roots grow right through the walls; and, unless completely dried out before your customer plants pot and all, they start growing as though they'd never been transplanted.

NOW! Master Blend® Merion Formula at Lower Prices Than Ever!

The popularity of Master Blend® Lawns in the northern part of America has reached an all-time high. Homeowners and turf experts alike attest to its all-around superiority. And here's why they swear by it:

Using over 50% Merion Blue Grass as a base, Vaughan's has developed a mixture which germinates quickly, maintains an excellent color all year round and grows in sun, or light shade and in any soil: rich, sandy or clay. Vaughan's has done this by blending the best of the latest grasses developed by turf breeders:

Delta Kentucky Blue Grass discovered in Canada. Adds quick germination to Master Blend.

Pennlawn Red Fescue, a variety ideal for shade, quick germination and sandy soil.

Newport Kentucky Blue Grass germinates quickly, blends well with Merion and maintains excellent fall color.

This blend formulated by Vaughan's, the introducers of Merion, is designed to make it possible for the average homeowner to grow America's finest lawn with ease. All of Vaughan's tests have shown that this new blend produces a lawn faster, with less work and with more complete satisfaction than was possible with Merion alone. This conclusion has been reinforced by leading universities.

That's why Vaughan's unhesitatingly recommend Master Blend Merion Formula for your customers. Considering the work, cost of other materials and time involved in making a new lawn or re-seeding, the greatest economy a homeowner can make is to use the best seed available. All-perennial Master Blend® fills this bill. Unlike cheap mixtures which never really look right and which need re-seeding each year, this blend improves in appearance each year, adding beauty and value to the home.

And, amazingly, one pound of Master Blend® covering about 750 sq. ft. goes as far as 2 to 3 lbs. of the best Kentucky blue grass. So there is actually an initial saving, too.

MASTER BLEND® MERION FORMULA

Contains over 1,250,000 seeds of pure Merion strain of Kentucky Blue Grass plus Pennlawn Creeping Red Fescue, Delta Ky. Blue Grass and Newport Ky. Blue Grass. Our seed does not contain any Poa Annua or Bent.

PATENTED VARIETIES

CHICAGO PEACE

Plant Patent No. 2037

We consider this a "must" variety. It is a true "color sport" of Peace identical in every respect as to plant, habit, foliage, buds, and flower excepting in flower color. The color is a reverse of Peace color; in the flower where Peace color is yellow, Chicago Peace is pink, and where Peace is pink the color in Chicago Peace is yellow. Over the years we've seen several sports of Peace, none of them good enough—but **this one is it**—the one we've been looking for!!

FORMULA MIXTURE: This is a well balanced mixture of the best commercial types made up from separate colors. Formula varies slightly with the season, as some varieties are better at one season than at others.

Mixture is approximately as follows:

60% Solid Red Types
10% Solid Blue-Purple Types
15% Red and White Combinations
10% Purple and White Combina tions
5% Solid White

These varieties will mature in 90 to 120 days depending on climate. These seedlings are not to be compared to the common 5 petal varieties such as those from Belgium sources. All strains have flowers of 6 to 8 petals.

INDIVIDUAL COLORS

IMPROVED RED VELVET: Our finest red. Very strong producer of large ruffled cardinal red flowers. Well grown plants of this variety regularly produce 50 to 75 bloom in 5" or 6" pots.

ROYAL VELVET: Very heavy producer of velvety deep purple flowers. Strong growth habit.

NEW CHERRY BELLE: An improved strain that produces up to 100 blooms per plant. Deep cherry red flowers with white border. Very showy and large plants.

PINK PEARL: A new strain with soft rose-red petals around a radiating white center. Produced by inbreeding our older but dependable red and white velvet.

SNOW BIRD: Gigantic pure white flowers of extreme beauty. Strong growing plants with beautiful foliage. Long lasting flowers that open under adverse conditions.

PURPLE CLOUD: Choice plants full of rich purple bloom that have a white center radiating out into the petals to make a pleasing effect.

IMPROVED COLOSSAL HYBRIDS: Super size flowers varying in color from soft rosy pink to red or wine color on beautiful soft foliage—fast maturing plants that hold their blossoms high and erect.

PURPLE BELLE: Deep purple flowers with good white border. A **new strain** not at all like the old Emperor Wilhelm. Heavy plants with lots of buds.

Val Peat Pot—Polyskin

The POLYSKIN POT introduces a new concept in horticultural containers. Combining the advantages of the peat pot, the clay pot, shipping pot and wooden band, the multi-duty POLYSKIN POT performs with distinction as:

- a plantable growing pot
- a sturdy shipping container
- a merchandising container

The POLYSKIN POT is a regular peat moss pot, with all its advantages, that has been furnished with high durability of a shipping pot by the addition of an outer skin of polyethylene film.

As a result, plants potted in POLYSKIN POTS can be handled easily, shipped safely, over-wintered in cold frames, or benched for a year or longer.

Yet, POLYSKIN POTS retain all the benefits of standard peat pots—roots grow through the pot walls, absorbing nutrients in the process; the Polyskin is removed from the peat moss pot so that transplanting can be accomplished with no shock or root damage.

Because of their sturdiness and high moisture retention, POLYSKIN POTS can be utilized advantageously for virtually all plants which require transplanting.

Recommended Uses

POLYSKIN POTS have proved beneficial when used with:

Nursery stock including evergreens, broadleaf evergreens and flowering shrubs.

Florist crops such as bulbs, pansies and geraniums, Spring Bedding Plant.

Foliage Plants such as philodendron, pothos, ivies, dieffenbachia, Chinese evergreens.

How To Use POLYSKIN POTS

Plants started in POLYSKIN POTS require the same growing technique as plants grown in other peat pots with these exceptions:

- Less frequent watering is needed—because the POLYSKIN POT holds moisture even longer than a standard peat pot. (Small drain holes are cut in the "skin" to insure adequate drainage.)
- The outer "skin" must be peeled off before the plant and peat pot are transplanted. This is done easily by pulling down the tabs provided for this purpose.

Advantages of POLYSKIN POTS

POLYSKIN POTS combine the plus qualities of regular peat pots, shipping pots, clay pots and wooden bands.

POLYSKIN POTS increase the peat pot's durability without decreasing normal root penetration. The space between the pot wall and the "skin" permits adequate root penetration.

- Require less watering.
- Serve a double function: the same pot can be used as a growing pot and as durable, easy-to-handle, lightweight shipping container.
- Allow plants to be benched in the greenhouse for one to two years.
- Allow plants to be over-wintered in cold frames, with the pots retaining their shipability, and resistance to freezing hazards.

.....VAL-PEAT POTS

THE FINEST PEAT POT

Each year, Val-Peat pots are used by more and more growers. They know that Val-Peat pots year after year give the same uniformly fine performance. This uniformity is due to the blending of two types of peat moss plus high quality wood fibre with the correct amount of fertilizer. All Val-Peat pots are made right here in the United States in one factory under the watchful eyes of experienced personnel. Rigid quality control measures are met from the inspection and testing of raw materials right up to the finished product. Constant checks are made during all phases of production. The final check in greenhouses tests porosity, root penetration and other growth factors. Quality and this reliability are the reasons why more and more growers insist on Val-Peat pots. They recognize quality and uniformity. Val-Peat pots are available in both Lite-Weight, for short term crops and Standard Weight for longer term crops. We say, "a pot to fit every growing need."

Money–Saving MULTIPOTS

Produce Better Plants at Lower Cost
Save Labor, Save Soil, Save Space

The Secret of Multipot . . . It's a flexible plastic tray with molded-in, pot-shaped depressions. Plastic is extra smooth for easy plant removal and is water and air-tight to prevent the evaporative cooling of plant roots which can stunt growth. Drain hole in base of each pot. Trays are all 12x22 inches in size and are available with choice of pot sizes from 1¼ inches to 2¾ inches. There are 24 to 100 pots per sheet depending on size of pot. Multipots are completely durable. Use them over and over again; they should last 3 or more years in average service. Unharmed by chemical sterilization.

EASIER TO USE . . .

Simply heap on soil, then . . .

Level off soil with board and . . .

Plant individual cuttings.
And that's all you do.

ELECTRONIC SEALING

Vinyl is calendered in widths up to 6 ft. Wider covers are fabricated by electronically sealing stock width panels together. (Example: two 4½ ft. panels are sealed together to make a cover 9 ft. wide.) Covers may be ordered in any combination of stock widths, as shown above, in any length.

2 Panels
9 ft. to 12 ft. wide — **1¢** sq. ft. (add to custom
3 Panels—
13½ ft. to 18 ft. wide — **1.2¢** sq. ft. length price)
4 or More Panels—
19½ ft. and wider — **1.4¢** sq. ft.
Special Width
7½ ft. wide — **1.2¢** sq. ft.
Electronic Sealed Plastic Grommets—
6¢ per grommet
(For Partitions: Grommets spaced 12" apart along one edge of the film.)

VINYL ADHESIVE

Patching Kit (1¼ oz. tube of adhesive & swatch of vinyl) ..... $ .50
½ Pint Vinyl Adhesive (Brush Top Can) **1.10**
Quart Vinyl Adhesive **2.85**
Adhesive Dispenser ..... **.50**
Quart Thinner **1.10**

Note: In ordering steam sterilization covers allow 10% in length for shrinkage and contour of the ground. If maximum light transmission is not necessary, electronic sealed covers of weatherable vinyl should be ordered in the diffused lite film—it is easier to fold. The polished surface of the clear film causes it to block.

Because of postal regulations, quart cans of adhesive and thinner must be shipped by Railway Express or Motor Truck.
